

HALOS

Handy and Portable Radiator Panel

HALOS, the new portable radiant panel that can be wall-mounted, with a hi-tech design. HALOS makes use of the radiation principle to heat the elements, not the air, transforming infrared waves into heat when it comes into contact with an item

- a wall that is colder, or a person.

Instant, silent heating, without moving dust about and less humidity in the room.

Heating Style

HALOS includes our exclusive QUICK SUN TECHNOLOGY for better distribution of radiant heat over the entire heating surface and greater efficiency. This means a higher level of comfort within an extremely short period of time. HALOS can also be wall-mounted, using the wall support supplied with the product.

Safe, practical, economical heating. No maintenance or installation costs - all you need is a power socket!

Control System

HALOS comes in a 2 power level version: 750W and 1500W controlled by a settable ambient thermostat

Built-in operating LED indicator

Features

- Ultra-flat front panel of only 1.5 cm thickness .
- 2 power regulations (750W/1500W) + adjustable room thermostat
- "QUICK SUN TECHNOLOGY" for heating that is quick and evenly distributed
- Operation indicator light
- Handle for easy transport
- Can be installed on walls using the wall supports provided
- IP24 protection against bursts of water, ideal for installation in wet places
